Creating Permalinks

A permalink is a static url that will allow the user to locate a video and access from off-campus.

Click on any video title. Under the title is the “Record URL”, highlight and copy this url. This is the permalink. Paste it into Canvas or course documentation to allow the user to go back directly to this video.

Example permalink:

Also note that each segment in a video contains its own permalink. On the example above, the full program is “Health Literacy: Overcoming Patient Misunderstandings in Pharmaceutical Care”. If you want to only create a permalink for “Health Literacy: Scenario 2”, just click on that title in the program and a new permalink will display under the title.
